wiggler beamline

Evidence ready · 5 hit(s) in 412 ms

I found matching evidence in the local index. This answer is retrieval-only and does not use a chat LLM.

1. IVU beamline manual - Apr 10 2026.pdf · lane purple · domain beamline · distance 0.5147

on of just 4 mrad. The optical components of the undulator beamline are arranged in a bounce up/down configuration to prevent collisions with the wiggler beamlines. The wiggler beamline is divided into two branches: The Low Energy Wiggler (LEW), which operates in the energy range of 7 to 23 keV, and the High Energy Wiggler (HEW), spanning from 20 to 90 keV. The Low Energy Wiggler focuses on power diffraction, small-angle X-ray scattering (SAXS), and grazing incidence diffraction. In contrast, the High ...

ping the beam, a monochromatic beam position monitor, and a YAG crystal for beam monitoring and alignment. The beamline is equipped with a range of area detectors, including the Lambda 750k, Pilatus 100k, Rayonix 300HE, a silicon drift vortex detector, a scintillator detector, and an Avalanche Photodiode (APD). It also offers multiple sample environments, such as a closed-loop cryostat for low-temperature applications, a polarimeter, a mini X-ray emission spectrometer, a multi-sample stage, and high-tempe...

g Entry.' A window will pop up, prompting you to enter details such as project, SPEC file name, energy, etc. After filling in all relevant information, click 'Update Log.' Once updated, return to the main window and click 'Refresh Window' to view the updated data. To restore the beamline step by step to a previously saved configuration for a specific component, click the 'Advanced Restore' option. From there, you can choose the optical components (e.g., CCM, KB, Huber) you wish to restore individually. 10.7 B...

5. IVU beamline manual - Apr 10 2026.pdf · lane purple · domain beamline · distance 0.7731

mponents. It features a Double Multilayer Monochromator (DMM) and a Silicon Channel Cut Monochromator (CCM), which work in tandem to select the X-ray beam's energy. After these monochromators, a Kirkpatrick-Baez (KB) mirror pair focuses the IVU IVW 2 mrad 4 mrad 2 mrad Undulator beamline description 7 beam onto the end station, located approximately 52 meters from the source. Users can choose to bypass the CCM to boost photon flux by relying solely on the DMM or use both monochromators together for ...
